

# AKRON'S Commitment and Innovation Go the Distance

## OUR TRADITION

Since 1890, AKRON Porcelain & Plastics has satisfied its customers by providing total value in the supply of custom-molded ceramic and plastic parts. Our commitment has always been to provide reliable materials, engineering and parts performance backed by strong ethical values and financial stability.

### Extreme standards in Custom-molded Ceramics

For over 100 years, AKRON has combined craftsmanship and the science of ceramic engineering to develop solutions for our customers' requirements. AKRON'S technical ceramics division has satisfied customers in a wide range of industry segments where thermal and electrical insulation requirements are needed. We offer glazed and unglazed ceramic capabilities to solve your specific needs.

### Progressive technology in Custom-molded Plastics

AKRON has specialized in the custom-molding of plastics since 1957. In addition to our thermoplastics capability, we have assumed a leadership role in high temperature thermosets with capabilities in phenolics and leading-edge thermoset polyesters. AKRON maintains industry standards in our manufacturing and quality systems with vast experience in part and process engineering.

## OUR FUTURE

**Moving ahead,** AKRON plans on the continuation of its core competencies in Ceramics and Plastics (molding, hardware, finishing, and assemblies). We will devote our resources to creating a custom manufacturing model to solve the needs of our customers by working beyond convention with an approach that combines new ideas and processes, while meeting their requirements. We will actively solicit new technologies and emerging industries with the goal of using our vast material, engineering, and process knowledge to assist our customer, providing both cost-effective and value-added performance.

**Need to take an idea from design to production? GO TO EXTREMES WITH AKRON!**

## OUR PRODUCTS

AKRON'S custom-manufactured products go beyond expectations, with performance and durability satisfying the most demanding industries.
